What is 5G TECHNOLOGY ?

5G technology represents the “Fifth-generation” in a field of wireless communication network. It promises decreased latency, high speeds, and a more associated environment friendly. It is a new global wireless standard after 1G, 2G, 3G, and 4G networks. 5G enables a new kind of network that is designed to connect virtually everyone and everything together including machines, objects, and devices.

5G wireless technology is meant to deliver higher multi-Gbps peak data speeds, ultra-low latency, more reliability, massive network capacity, increased availability, and a more uniform user experience to more users. Higher performance and improved efficiency empower new user experiences and connects new industries like pharmaceutical industry. The 5G technology is a paradigm shift because it is not only about a network. Instead, it is about an ecosystem of devices and sensors which can be intelligently connected in order to overhaul business and economic policy.

Functioning: Impedance Flow Cytometry for Cell Separation

Movement of Cell in Fluid with Influence of Electric Field Dielectrophoresis

CASE-I: $\epsilon_{cell} < \epsilon_{medium}$ DEP force was first explored by researcher H.A. Pohl in 1958 (Pohl, 1958) and can mathematically expressed by equation below

Cell moves away from electrodes (Weaker Electric Field)

$$(F_{DEP}) = 2\pi r_{cell}^2 Re\{CM^*\} |\nabla E_{rms}|^2 \quad (1)$$

Here:

CASE-II: $\epsilon_{cell} > \epsilon_{medium}$ Cell moves towards electrodes (Stronger Electric Field)

R = Radius of the cell/particle
 ϵ_m = Medium permittivity
 $[CM^*]$ = Clausius Mossotti factor
 $|E_{rms}|^2$ = RMS value of electric field

ϵ_p^* = Complex permittivity of particle
 ϵ_m = Medium permittivity of medium

$$CM^* = \frac{\epsilon_p^* - \epsilon_m}{\epsilon_p^* + 2\epsilon_m}$$

$$\epsilon_p^* = \epsilon_p - j \frac{\sigma_p}{\omega}$$

$$\epsilon_m = \epsilon_m - j \frac{\sigma_m}{\omega}$$

What is Soft Computing?

- Soft Computing is a field that currently includes
- Fuzzy Logic
- Neural Networks
- Probabilistic Reasoning (Genetic Algorithms and Evolutionary computing etc.)
- Other related methodologies
- Soft Computing combines knowledge, techniques, and methodologies from the sources above to create intelligent systems.

AI Approach

- An expert system: one of the most successful (conventional AI products)

Diagram illustrating the AI Approach: A User interacts with an Inference Engine, providing Questions and receiving Responses. A Knowledge Engineer acquires Knowledge into a Knowledge Base (KB) containing rules and facts, which are then used by the Inference Engine.

Introduction: Numerically Control Oscillator

- Generates a discrete-time, discrete-value form of any waveform (sinusoidal signal)
- Tunable digital frequency generator: takes source frequency (f_{ref}) as input and outputs digitized sinusoid signal (f_{out}).
- Frequency can be tuned by a frequency control word register (FCW)

Table.1 :NCO Advantages over other analog methods:

Parameters	Numerical Control Oscillator	Analog Oscillator
1. Size	Small Area	Bulky in nature
2. Power Consumption	Low	High
3. Frequency and Phase Tunability	Precise control is possible	Precise control is not possible

Applications: 1. Aerospace 2. Mobile communications 3. Satellite Communication 5. Function Generators and 6. Radio Receivers

NCO Design: for Direct Digital Frequency Synthesis (DDFS) & Digital Up Converter/Digital Down Converter

Application	Frequency Resolution	Resource Utilization (Area)	Conversion Time/Speed	Design Complexity
1. Direct Digital Frequency Synthesis (DDFS)	Good (Generates frequency in MHz)	Low	Lowest	Simple
2. Digital Up Converter (DUC) Digital Down Converter (DDC)	Precise (Directly generates frequency in GHz)	Low	Moderate	Moderate
